### REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: The instant invention is drawn to a molding composition comprising a mixture of interpenetrating polymers comprising a first phase of a crosslinked isobutene polymer and a second phase of a reinforcing polymer which comprises (meth)acrylic and/or vinylaromatic units, wherein the first phase comprises the reaction product of an isobutene polymer with an average of at least 1.4 functional groups in the molecule and of a crosslinking agent with an average of at least two functional groups in the molecule, and wherein the functionality of the functional groups of the crosslinking agent are complementary to the functionality of the functional groups of the isobutene polymer, wherein the functional groups of the isobutene polymer are exclusively at the ends of the isobutene polymer, wherein the isobutene polymer has a number-average molecular weight of from 500 to 50 000 prior to the crosslinking process; and wherein the crosslinking agent is at least one of a diisocyanate and a polyisocyanate; a method of making such compositions and a method of using such compositions in final products.

While prior art of record discloses molding composition comprising a mixture of interpenetrating polymers comprising a first phase of a crosslinked isobutene polymer and a second phase of a reinforcing polymer which comprises (meth)acrylic and/or vinylaromatic units, wherein the first phase comprises the reaction product of an isobutene polymer with an average of at least 1.4 functional groups in the molecule and of a crosslinking agent with an average of at least two functional groups in the molecule, and wherein the functionality of the functional groups of the crosslinking agent are

complementary to the functionality of the functional groups of the isobutene polymer, wherein the functional groups of the isobutene polymer are exclusively at the ends of the isobutene polymer, wherein the isobutene polymer has a number-average molecular weight of from 500 to 50 000 prior to the crosslinking process, the prior art does not teach or fairly suggest crosslinking agents comprising isocyanate functional groups complimentary to the functionality of polyisobutene.

The restriction requirement is withdrawn and the process claims are rejoined with the product claims as being of the same scope and incorporating all of the limitations of the allowed product claim.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
